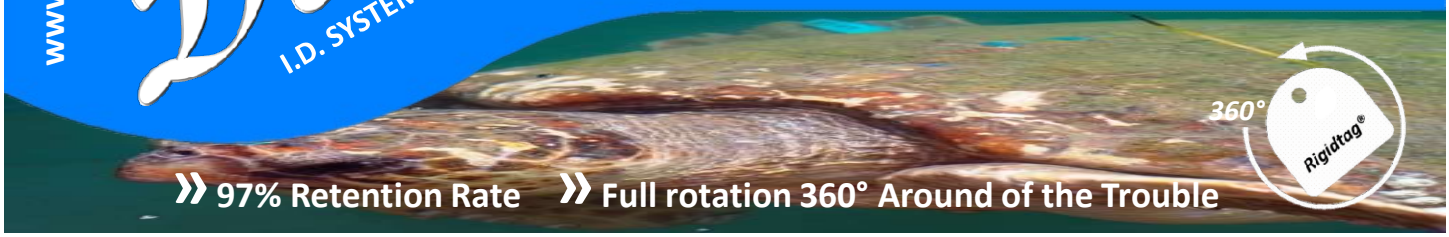
TURTLE MARKING

SEA RESEARCH TAGS



» 97% Retention Rate » Full rotation 360° Around of the Trouble

Jumbo Rigidtag® Standard

The **Jumbo Rigidtag®** is a long term eartag and made 100% from high quality nylon. The medium size of **Jumbo®** its ideal for small and large animals and serves cases where imprinting is required host of information and complicated print options. Distance between the both parts of the tag 10mm for normal flap size.

Jumbo® Applicator

Both versions of **Rigidtags®** are ideal for sea turtle marking, because the full rotation (360°) of the parts reduces the restriction of movement of the flaps without causing stress to the turtle, as is the case with metal tags. The metal tags consist of one part and apply to a longitudinal section. These specific application conditions prevent further development of the flap or any possible swelling due to injury etc.

The printing of the **Jumbo®** versions for sea turtle marking, done only with Hot Embossed at a depth that can range from 0.5mm to 1mm inside the tags. This ensures the lifetime of the printed data, even if the print shade fades the data will remain there, no matter how much wear a tag suffers.

» Special Materials for Extremely Long Term Identification.
